Statistics from Scientific American, November 1926

Safe walkways *prevent* thousands of accidental deaths and injuries.

Anti slip treads

AMERICAN ABRASIVE METALS CO.
FIFTY CHURCH STREET, NEW YORK CITY
BOSTON ♦ PHILADELPHIA ♦ CHICAGO ♦ BUFFALO ♦ PITTSBURGH

U. S. Army Base at South Boston, Mass., which together with So. Brooklyn Base, contains over 400 tons of Feralun.

ALUMALUN *Anti-Slip Treads*

ALUMALUN is specially desirable on marble stair treads, door saddles, and in highly ornamental locations where a silver white color will harmonize. Alumalun Anti-Slip Treads have been approved by the U. S. Navy Dept. (specifications 12T4c, June 1, 1925), as meeting their rigid standards, and are used on battleships and airplane carriers because of their anti-slip qualities and resistance to corrosion by salt water.

ON stairs and walkways in every type of structure, particularly where traffic is heavy and the wear severe, safety and durability can be combined with greatest economy by the installation of Feralun Anti-Slip Treads. They not only reduce maintenance cost, but also through the reduction of accidents lower the cost of compensation insurance which is made on an experience basis.

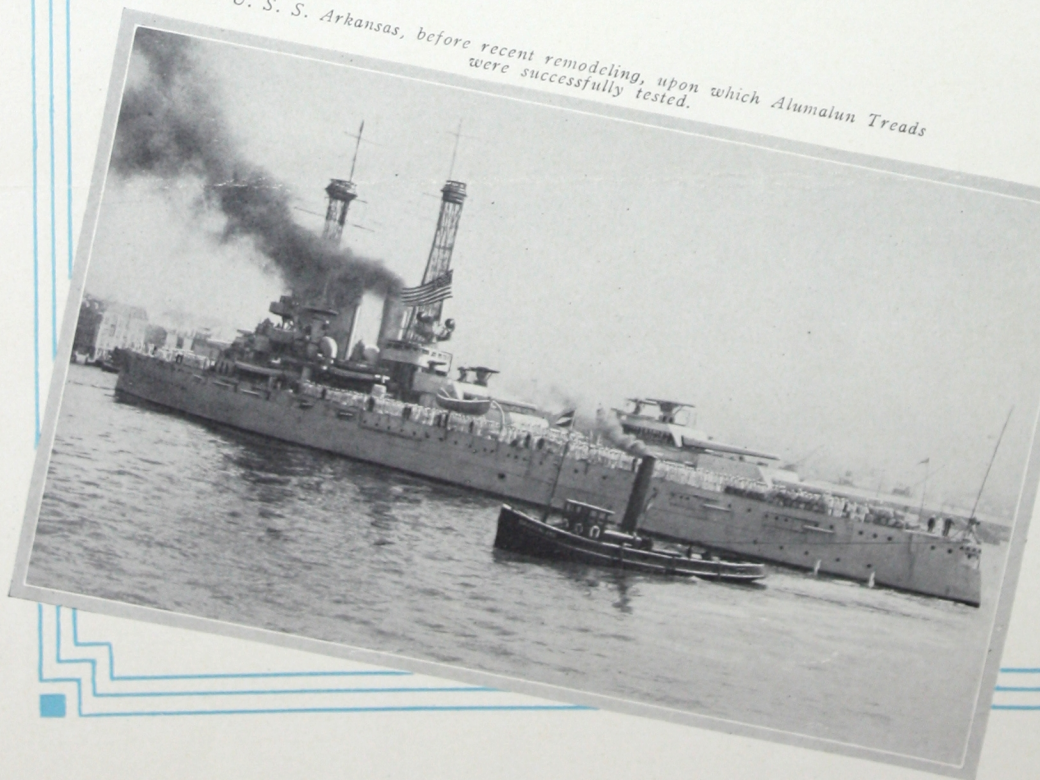

Feralun, Alumalun, and Bronzalun Anti-Slip Treads are manufactured from high grade metals into which is cast the hardest known, electric furnace abrasive, which projects above the surface of the casting and retains its anti-slip efficiency for the life of

most structures. Castings are made for use as stair treads and landings, door saddles, elevator thresholds, floor plates, shipping platforms, trench covers, drainage gratings, ramps, etc.

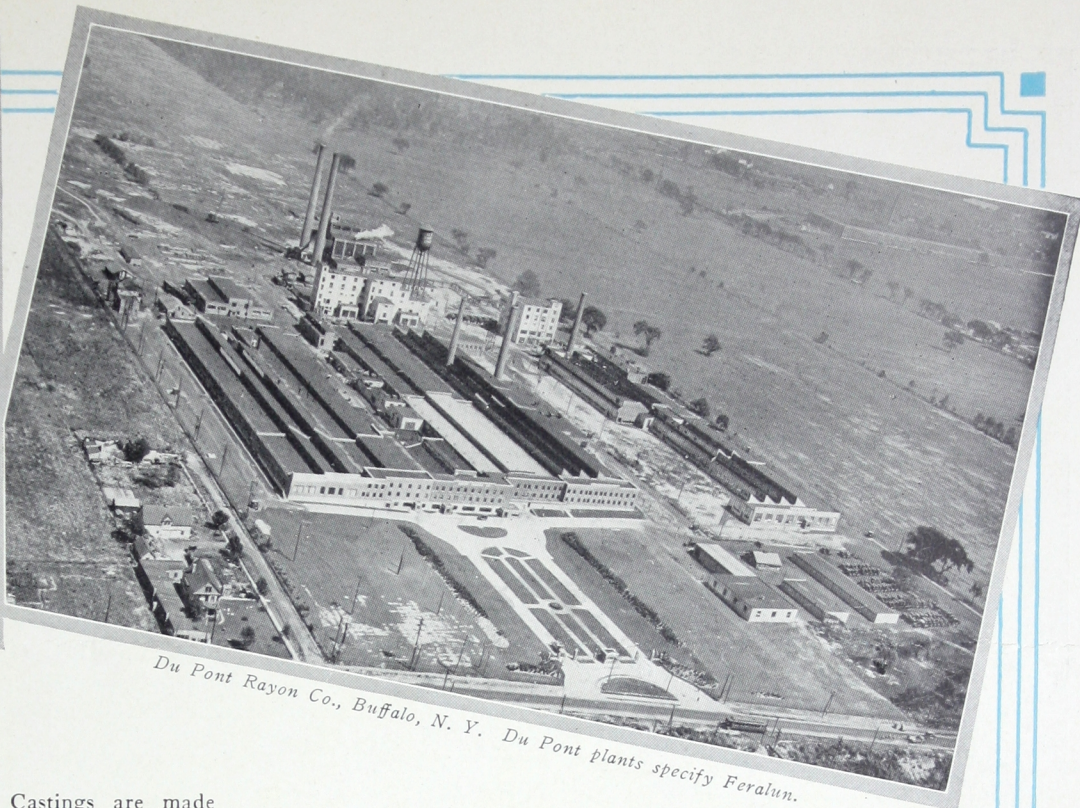

The wide use of these treads attests their utility and safety. In the great industrial plants, in government building projects, in the structures of

the large public utilities, in the architecturally perfect modern hotels and in the principal schools, clubs and hospitals, such as are illustrated above and below, will be found the Anti-Slip Treads of Feralun, Bronzalun, or Alumun.

Detail sheets will be sent on request.

equipped with Bronzalun elevator thresholds.

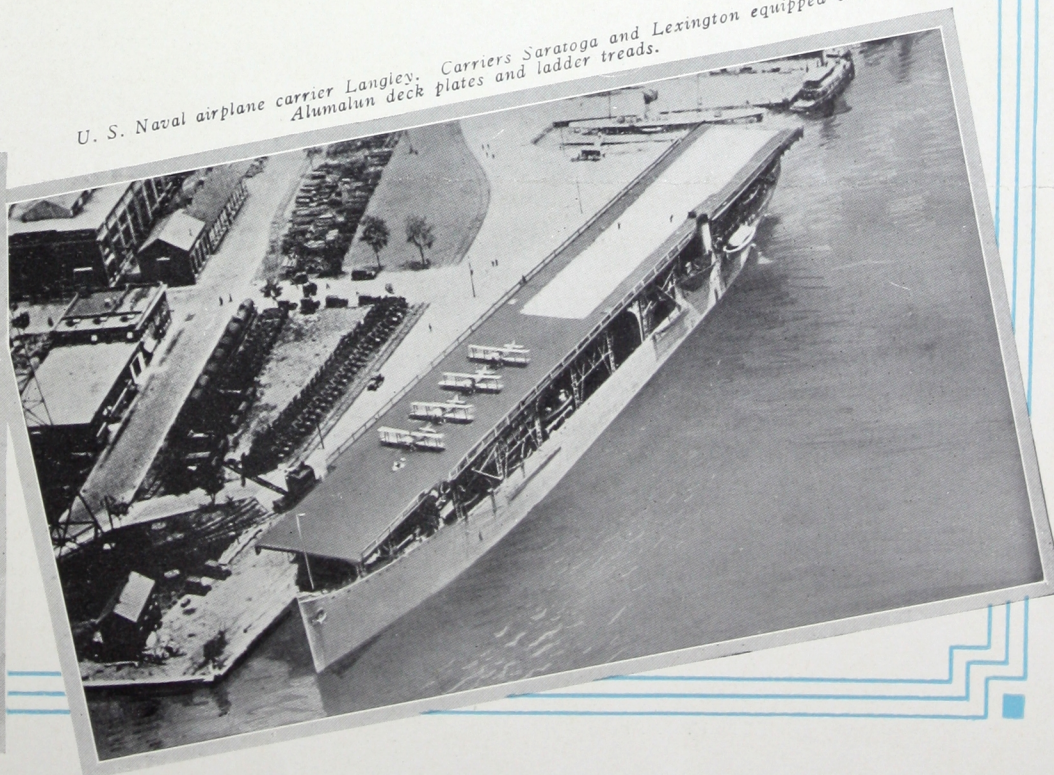

Du Pont Rayon Co., Buffalo, N. Y. Du Pont plants specify Feralun.

BRONZALUN Anti-Slip Treads

BRONZALUN, for entrance steps, door and elevator thresholds, etc., is similar in form to the better known Feralun Tread, except that bronze instead of iron is used as a matrix. At a cost favorably comparable with cast brass Bronzalun Anti-Slip Treads provide the advantages of unusually attractive appearance plus durability and safety.

U. S. Naval airplane carrier Langley. Carriers Saratoga and Lexington equipped with Alumun deck plates and ladder treads.

The new home of the New York Evening Post.

Safety First in the Newspaper Field

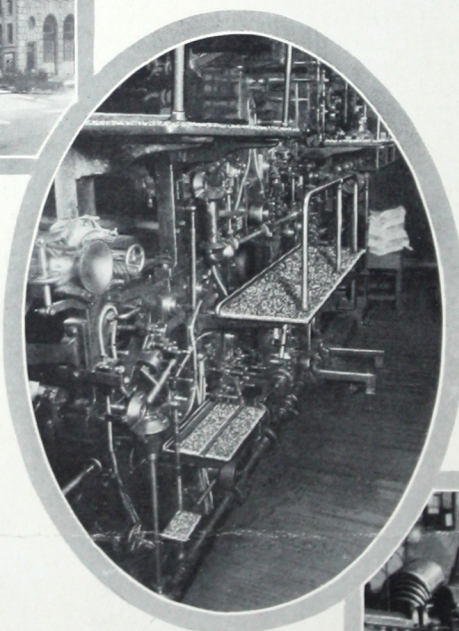

IN the most recent newspaper structures Feralun Anti-Slip Treads have been specified both for safety and durability and as insurance against time-losing accidents. Feralun Treads have been installed as floor plates in reel and press rooms, on the stereotyping floors, on the presses, stairs and ramps in many of the largest newspaper plants throughout the United States.

In Your Plant

A VITAL feature of newspaper plant design is the prevention of accidents which might incidentally delay the issue of an edition and cause the loss of service of a valued employee by injury.
